Section 3

Common Use Cases

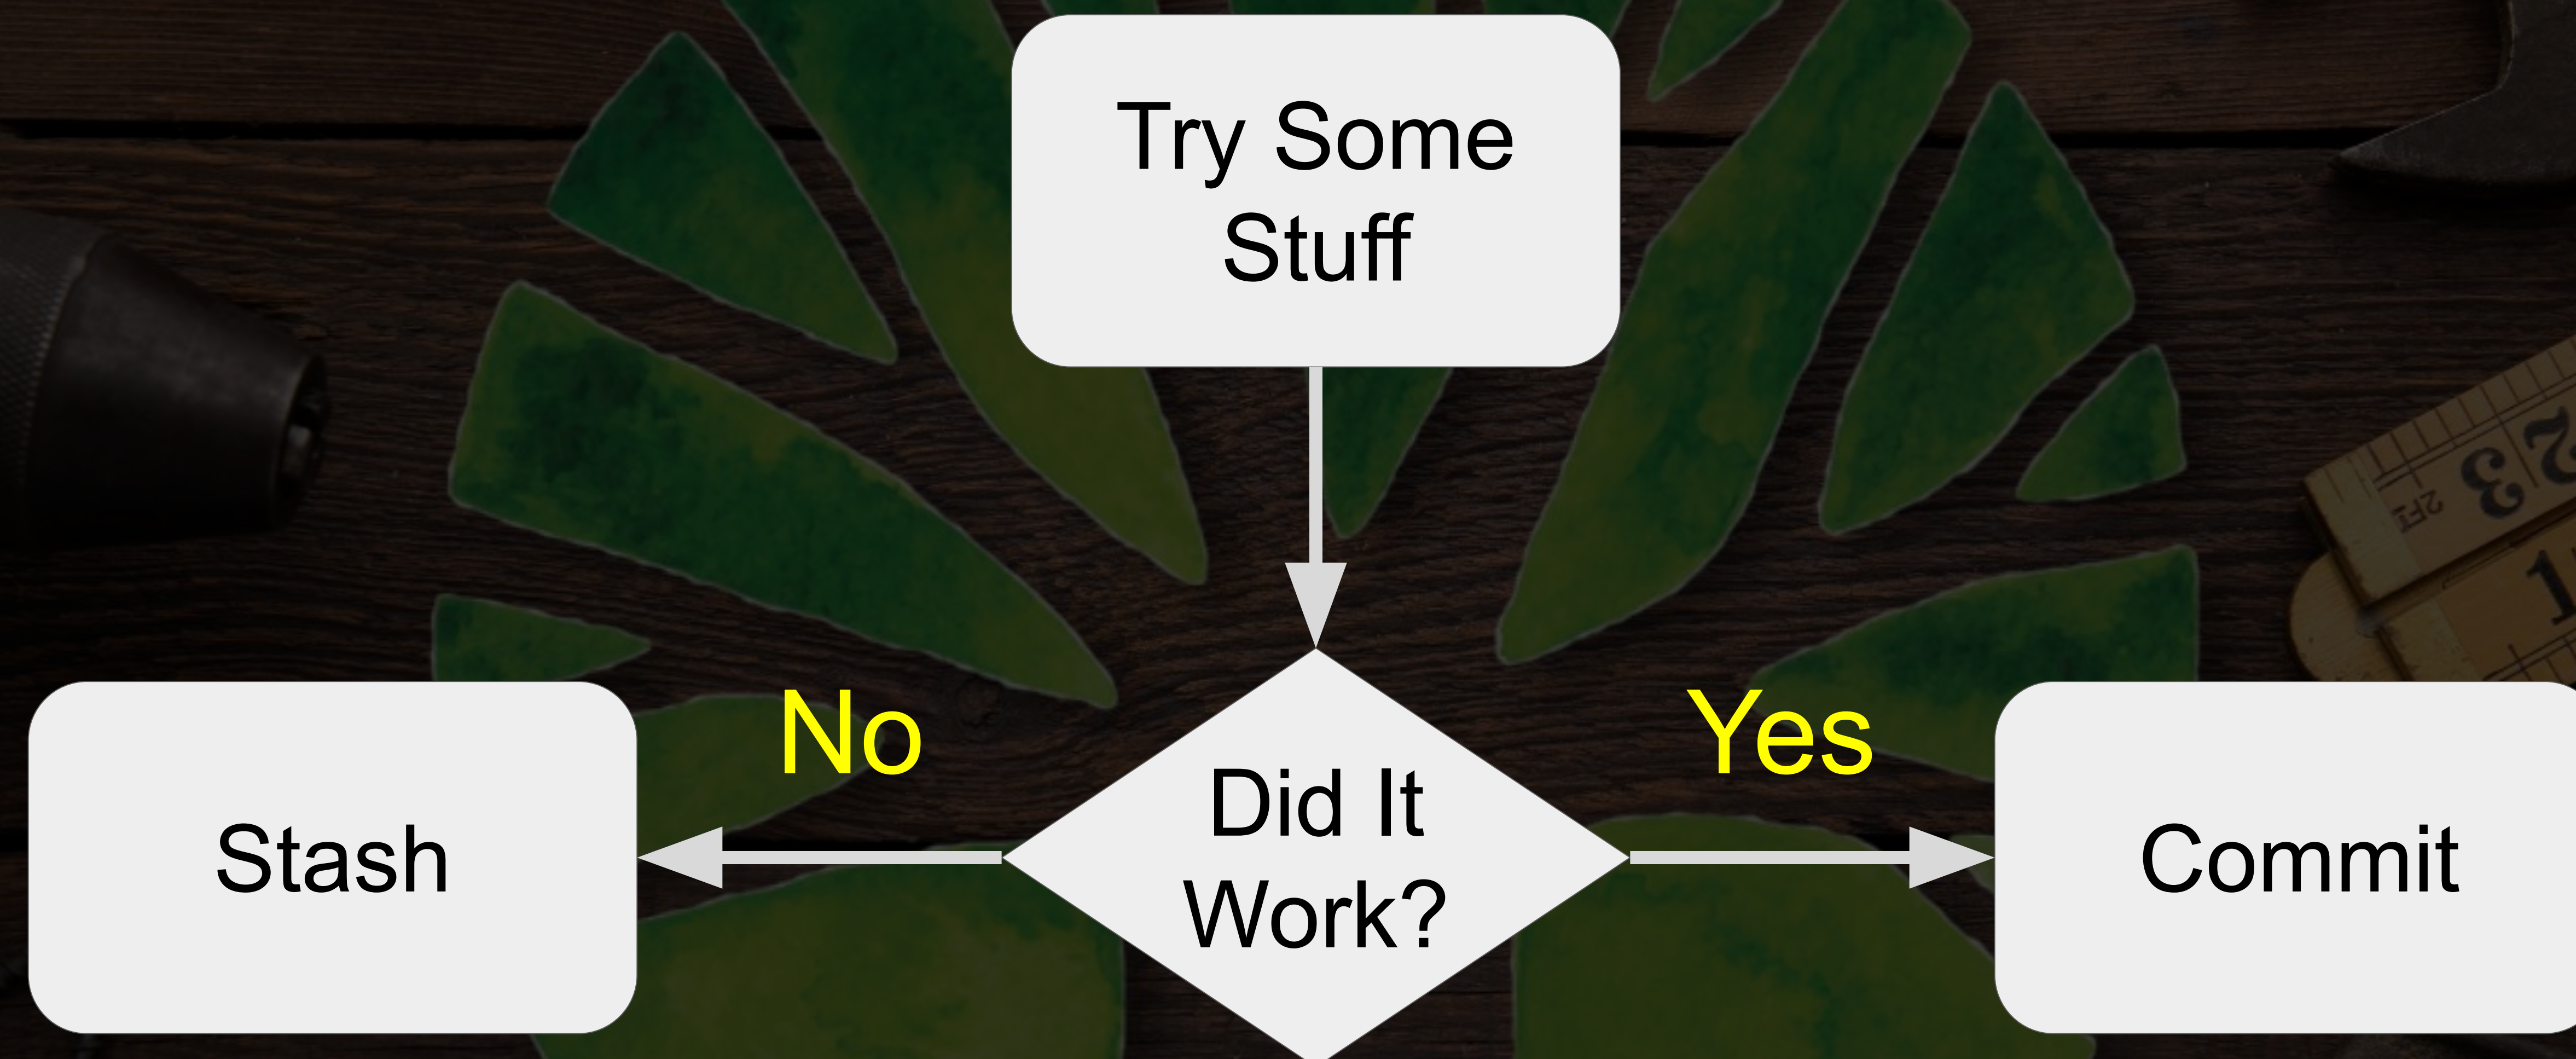

<https://gDev.tv/gitSlides>

Intro & Stashing

<https://gDev.tv/gitSlides>

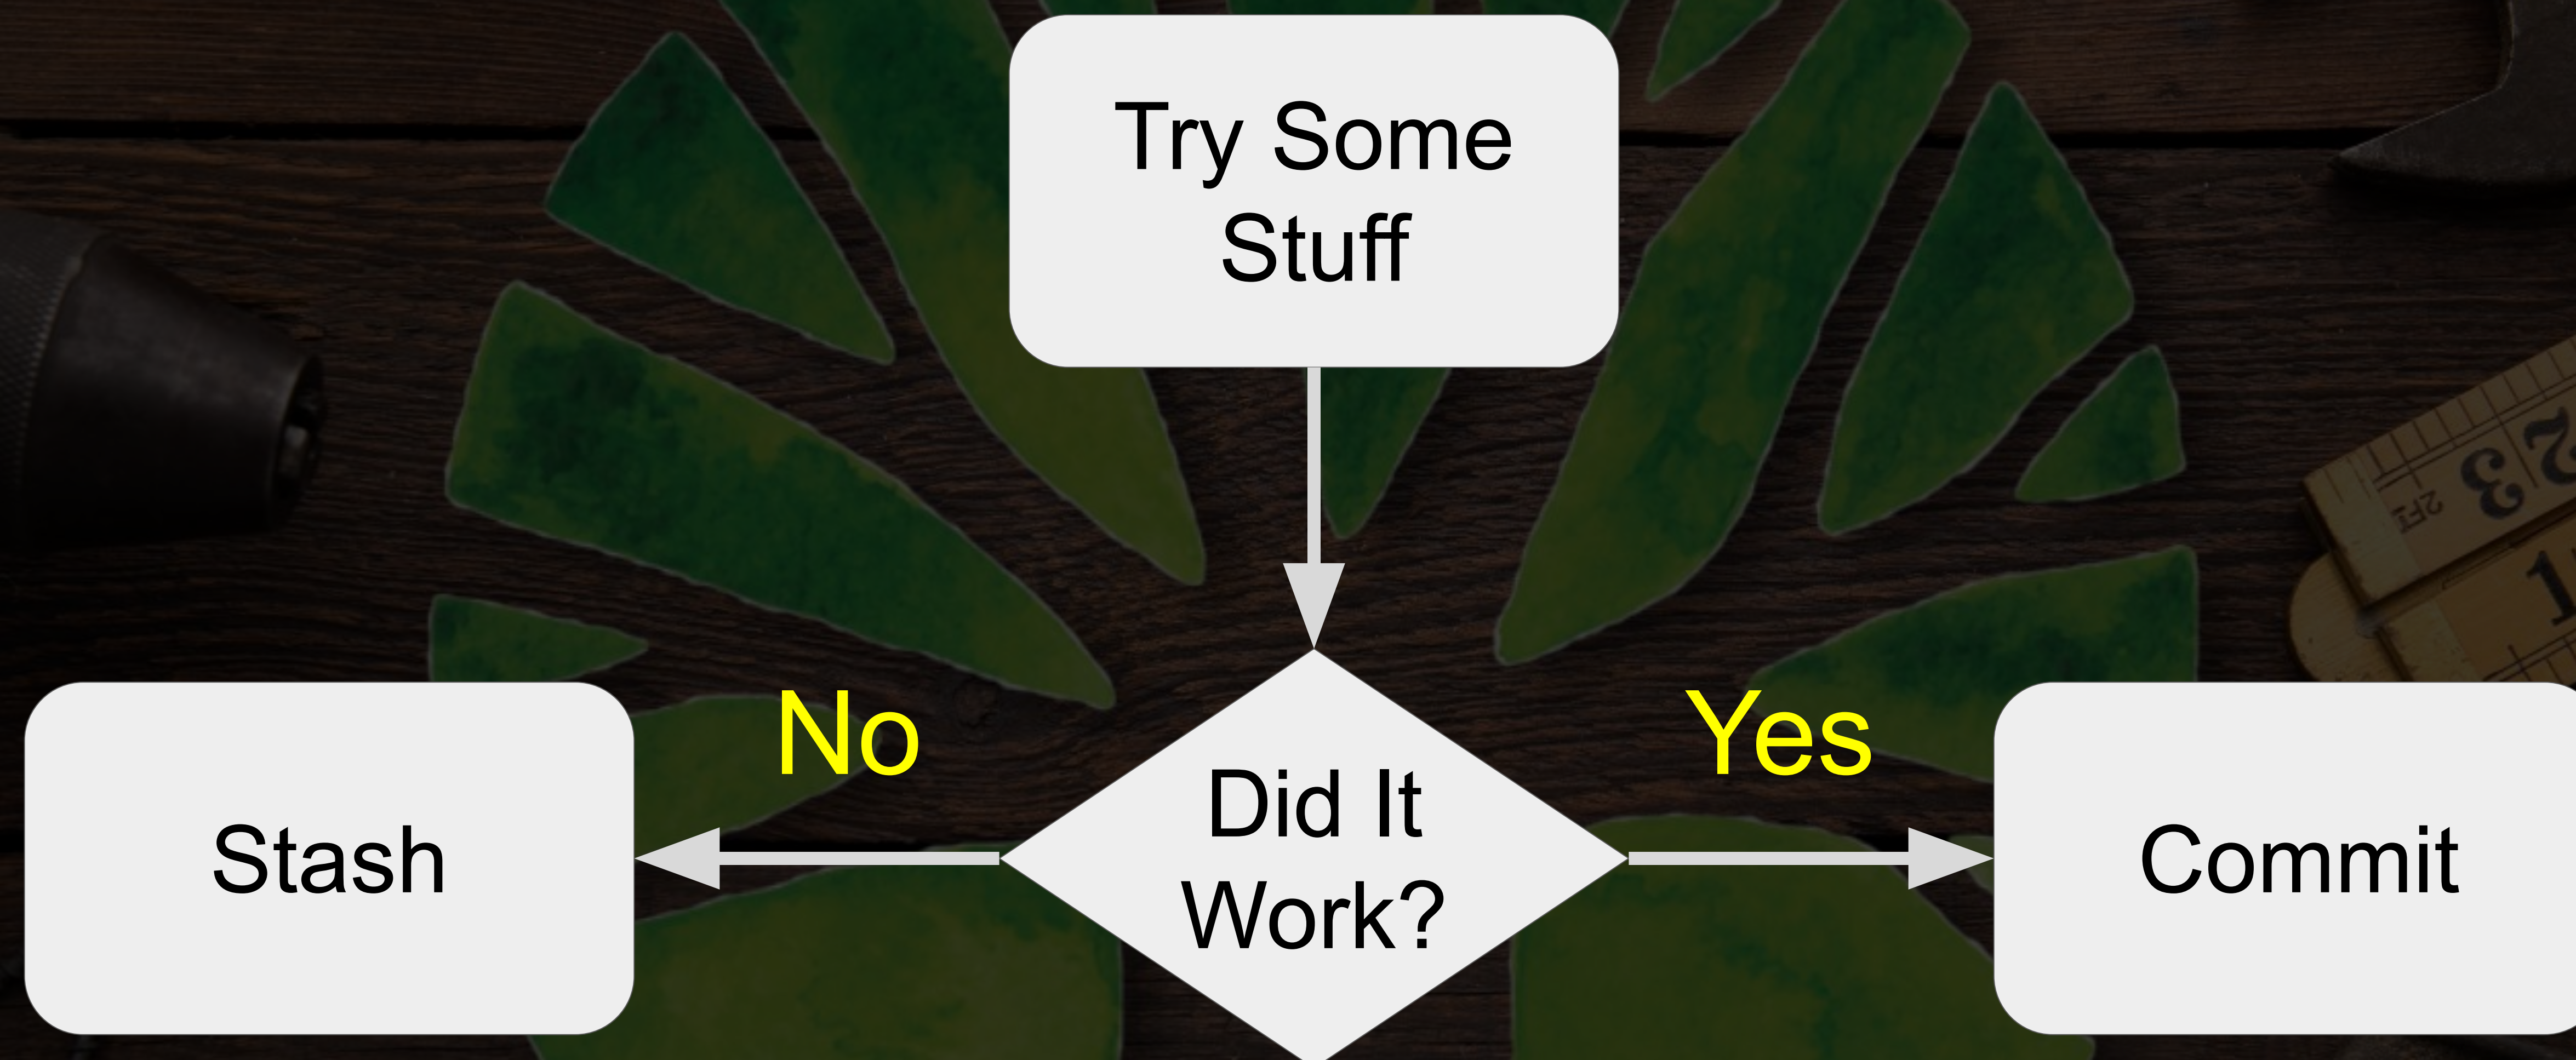

Commit

<https://gDev.tv/gitSlides>

How To Use Branches

<https://gDev.tv/gitSlides>

Git is a great slave, but a terrible master

Create 2 Hanging Branches

- Welcome to your first challenge slide!
- No more just watching the course!
- Create at least two hanging branches.
- Share a screenshot with the community.

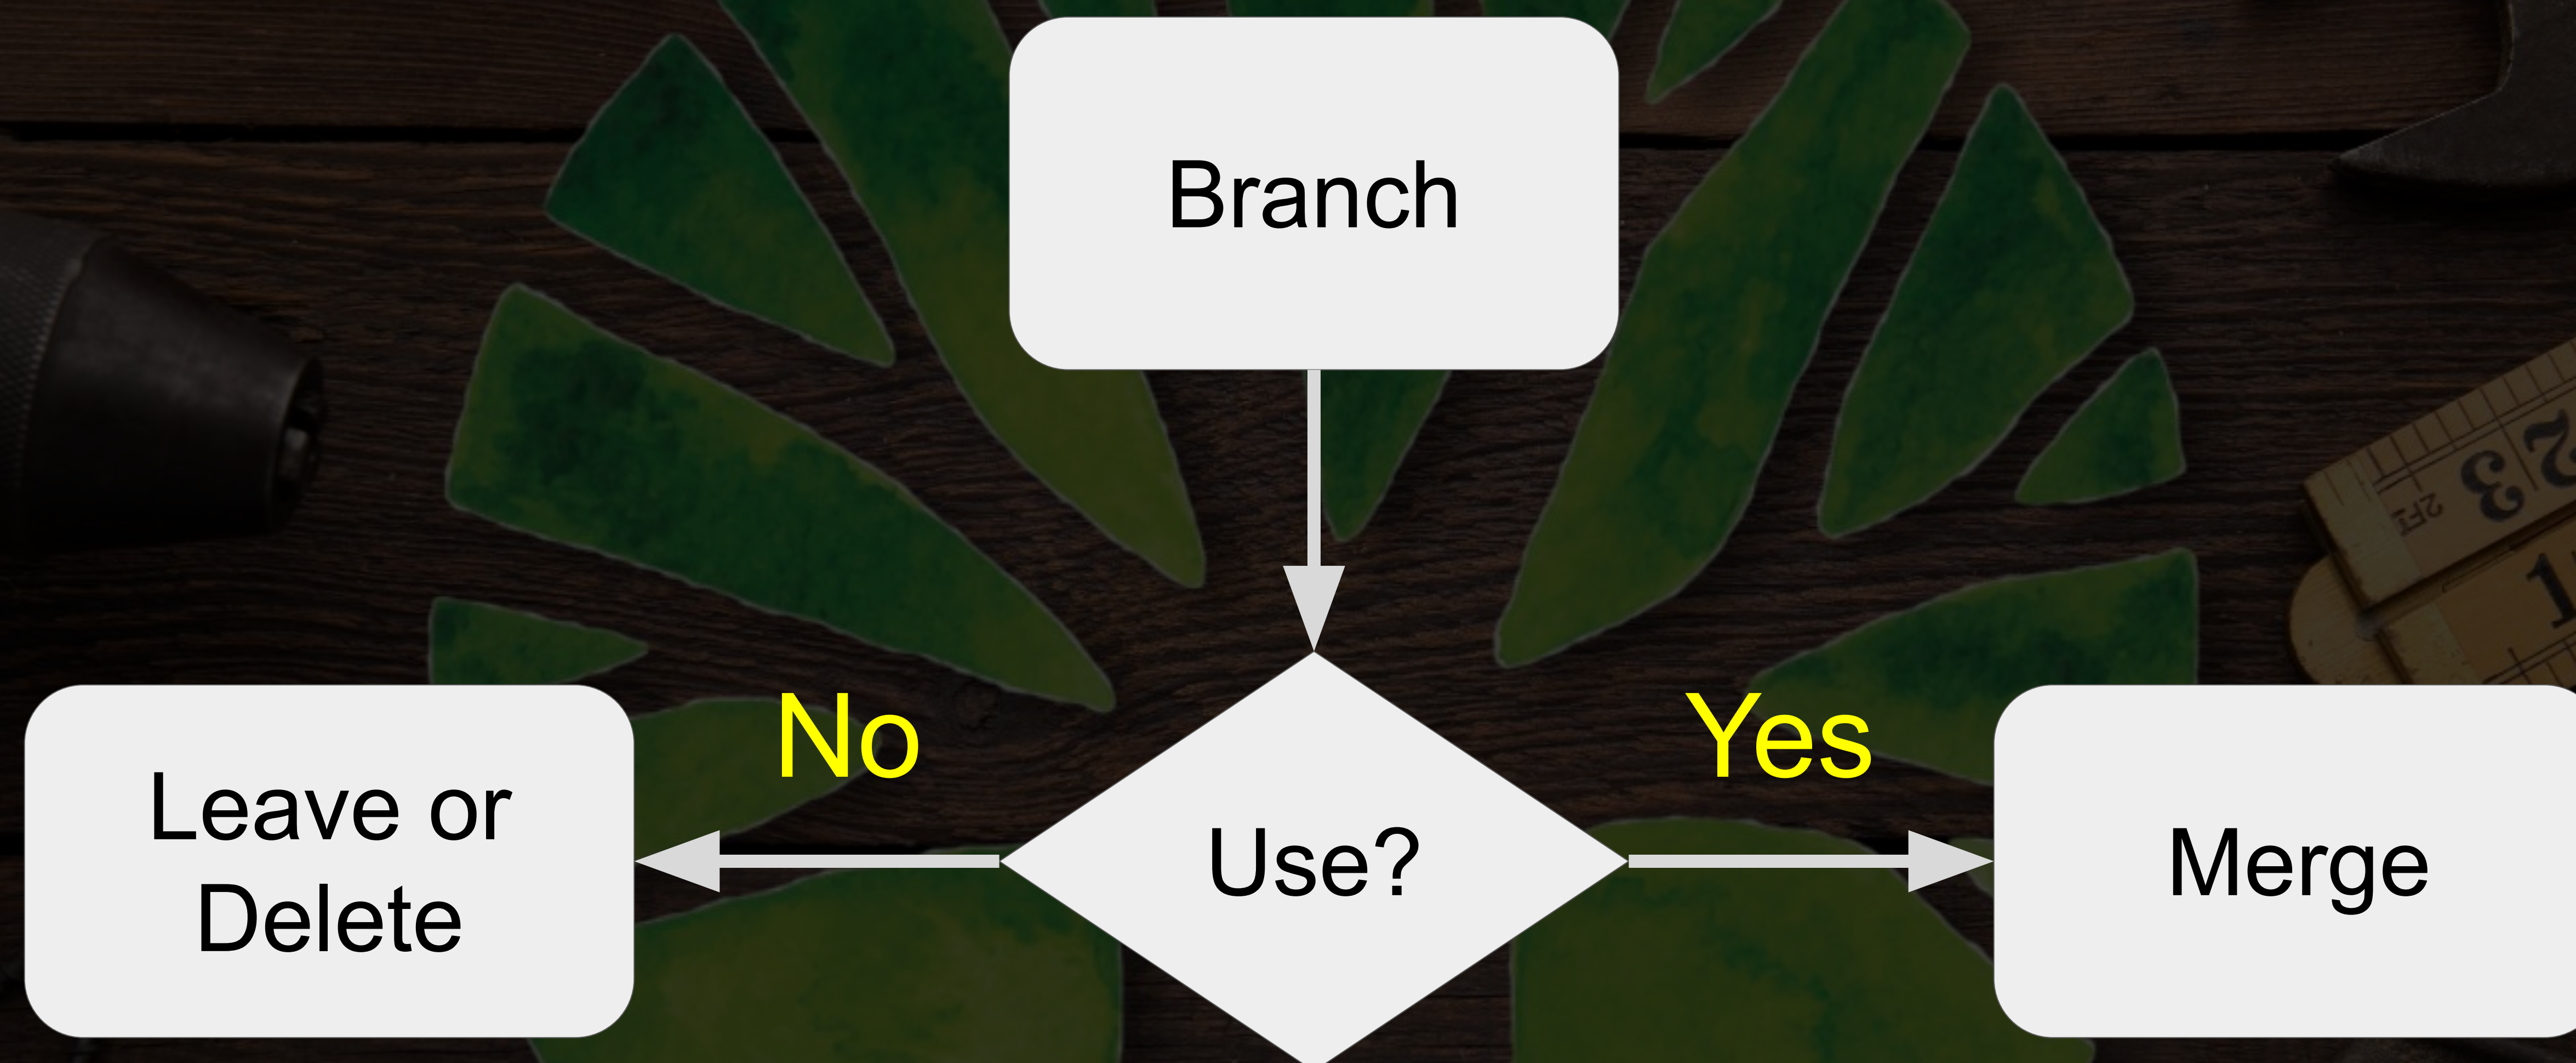

A branch is just a pointer to a commit.

Introducing Merging

<https://gDev.tv/gitSlides>

Merge early, merge often

Practice a Merge

- Find a simple merge with no conflicts.
- Practice merging yourself.
- Share your results / challenges.

Simple Merge Conflicts

<https://gDev.tv/gitSlides>

"Mine" = current branch
"Theirs" = the branch we're merging in

Resolve a Merge Conflict

- Setup for a simple merge conflict.
- Resolve the conflict with “mine”.
- Describe what’s going on to someone else!

Revert or Reverse Commit

<https://gDev.tv/gitSlides>

Reverse A Commit

- Undo a feature added in a previous commit.
- Ensure it works.
- Behold the power of good version control.

(Also thank Unity for playing well)

Section 3

Real Examples For Power Users

<https://gDev.tv/gitSlides>

GitHub Structure 101

<https://gDev.tv/gitSlides>

Person XOR
Organisation

Repository

Contributor

Branch

"Everything is marketing"

The background of the slide features a dark wooden surface with various tools scattered across it, including a wrench, a ruler, and a pair of pliers. A green plant with large, pointed leaves is positioned in the center. In the bottom left corner, there is a green circular icon with two white plus signs. In the bottom right corner, there is a red square icon with a white GitHub logo.

To consider re GitHub setup...

- + You and your co-workers' profiles.
- + Your prospects' and customers' experience.
- + Organisation / repository structure.
- + Visual appeal / consistency.

Improve Your GitHub Profile

- Change the default image.
- Include some link, Twitter, whatever.
- Write a sentence about what you do / want to do!
- Consider renaming your repos now.
- Do you need organisation(s)?
- Share your profile again in the community.

Cloning Remote Repos

<https://gDev.tv/gitSlides>

Clone One Of Our Repos

- Visit <https://github.com/CompleteUnityDeveloper2>
- Clone one of the games there.
- I'll be using Project Boost.
- Upgrade to the latest Unity.
- Test it works after upgrade and commit.

Introducing The Terminal

<https://gDev.tv/gitSlides>

Commit On The Terminal

- Make your first commit from the terminal.
- The purpose is to get your confidence up.
- Some things can only be done on the terminal.
- I'll show you a great example after in my solution.

How & When To Force Push

<https://gDev.tv/gitSlides>

Force push destroys information on the remote,
think if it's really necessary before using.

Do your first “force push”

- It *should* feel a little naughty.
- The point is to do it consciously.
- Enjoy being a rebel!

Diff Stats For Refactors

<https://gDev.tv/gitSlides>

`git diff --stat s0mec0mm1tsha '*.cs'`

Refactor & Check Simplicity

- Do some long-overdue refactoring.
- Commit regularly along the way.
- Check if the net effect was simpler.

Picking Cherries

<https://gDev.tv/gitSlides>

I've got uncommitted changes, how do I
change branch now without losing
anything?

Added by you

Large File System (LFS)

<https://gDev.tv/gitSlides>

Try And Push A Large File

- Follow the PRIRP process.
- Commit a 100MB+ file.
- Try pushing to GitHub and observe the error.
- Continue the video and see how to use LFS.

git lfs migrate

A Tour of GitHub in 2019

<https://gDev.tv/gitSlides>

Blame & History

<https://gDev.tv/gitSlides>

Read & Interpret a Blame

- Click “Blame” on any code file in any repo.
- Make sure you understand what you’re seeing.
- Remember this as a useful tool for later.
- Also click “History” button.
- Explain the difference in the community.

Section Wrap-up

<https://gDev.tv/gitSlides>

Section 4

Unity Specific Git & GitHub

<https://gDev.tv/gitSlides>

Section Introduction

<https://gDev.tv/gitSlides>

Serialisation & Prefabs

<https://gDev.tv/gitSlides>

Play With Prefabs etc.

- Watching file changes is more fun than it sounds.
- Certainly more fun than watching paint dry!
- Play with prefabs, scenes, etc. and watch files.
- This will REALLY help you understand Unity.
- Will help you in a TEAM environment.

GitHub for Unity Plugin

<https://gDev.tv/gitSlides>

Explore GitHub For Unity

- Install the plugin from the Asset Store.
- Commit the additions to Plugin directory (10MB).
- Play with its facilities.
- Watch in SourceTree if you wish.

Locking Files For Collaboration

<https://gDev.tv/gitSlides>

Lock > Commit > Unlock.

If you change a locked file, don't commit it.

Collaborate With Another Student!

- Reach out on one of our community sites.
- Links in the resources, Discord may be good.
- Practice locking a file and collaborating.

Course Wrap-up
